Spread Point

The New SpreadPoint WB range of water bowzers is a modern and practical approach to improving your spraying productivity. Keeping your sprayer replenished with water and plant protection products at every field gate.

The use of ONLY Stainless Steel tanks ensure both the quality of the water and the longevity of the product. This reduces downtime with nozzle blockages and leaks. Couple this with spacious, convenient and safe storage for chemicals and many acres can be covered with one trip to base. Many features hatched from many years of spraying experience are infused in these machines and will be appreciated by the most professional operator. Capacity and additional feature options ensure a machine for each scenario.
