

Log Splitter

14 tonne

The MAJOR Log Splitter is a galvanised machine which is robustly constructed to withstand the punishment of continuous use. Safety is paramount at Major, with the operator required to use both hands to control the hydraulic ram.

The Log Splitter features a high carbon steel wedge that gives 14 tonne of hydraulic splitting force. It is quick and easy to fit to any tractor with a CAT I three point linkage.

It will easily power through logs up to 38cm in height. The floor level log bed allows for easy positioning of logs into place for splitting.

Model	LS3000G
Finish	Galvanised
Blade	Wedge blade
Operation	CAT I tractor linkage
Safety feature	Single person operation
Length	0.71m (2' 4")
Height	1.45m (4' 9")
Max. Log Size	0.38m (1' 3")
Weight	110kg
Pressure	14 tonne

Features

- ✓ Galvanised finish
- ✓ 14 tonne pressure
- ✓ CAT I three point linkage
- ✓ Two handed control required
