

AGRITON

OrganoFresh

**Crimped Grain and TMR additive
for conservation, increased
palatability and aerobic stability**

OrganoFresh is a ready to use liquid mix of beneficial Effective Micro-organisms (EM), containing organic acids, alcohols and yeast. The effectiveness of OrganoFresh is due to the inclusion of organic acids, which create a pH of 2.8.

As the acids are naturally occurring they are totally harmless to humans, animals and machinery. The micro-organisms produce beneficial bio-active substances that suppresses the heating up of feed rations, eliminating wastage as well reducing the mycotoxin risk. This also makes OrganoFresh an extremely effective crimped grain preservative.

As with the inclusion in the TMR using OrganoFresh to crimp grain works in the same way. The acidity of the organic acids preserve the grains by killing other micro-organisms, in particular the rotting and heating microbes as well as the mycotoxin forming fungi.

Benefits

Agriton | OrganoFresh

- **Prevents fungi, moulds and harmful mycotoxins**
- **Prevents secondary fermentation**
- **Improves palatability**
- **Non-corrosive and safe to use**

OrganoFresh is a mix of Effective Micro-Organisms specifically chosen to prevent heating and spoilage from occurring in feeds. The unique mix of microbes has a slightly sour yet fresh tangy aroma which increases palatability and therefore intakes.

Agriton, working together for a sustainable future

“Using OrganoFresh has increased intakes; especially for my young stock who are fed yesterdays milking ration. The silage never heats up and any hotspots in the silage are cooled when mixed”

*Mr Stewart,
Dairy Farmer
Dumfries*

Application:

OrganoFresh® is completely safe to use and non hazardous

TMR:

1 litre OrganoFresh® per 1 tonne of feed

Silage Face heating:

Dilute OrganoFresh® 1:10 and spray over face

Water Treatment:

1 litre OrganoFresh® per 1000 litres water

Available in:

20, 200 &
1000 litres

Specific weight

1.007 kg
per litre

pH
2.8

Crimping:

Cereals: Harvest grains at 25-40% moisture.

Moisture content of grains can drop as much as 2% a day just before harvest.

Maize: Harvest grains at 25-40% moisture

Pulses: Harvest grains at 25-40%

Application:

4 litres OrganoFresh® + 6 litres of water

Per tonne of feed

Storage:

Store in a clean clamp, compact grains, cover with a polythene sheet and weighted down to secure.
