

CD 5 Drinker

Product Details

Manufactured by SFS Plastics Ltd, this is our strong moulded polyethylene water drinker. It is suitable for all types of livestock (including Cattle, Horses, Sheep and Ponies etc.) and comes complete with a standard brass arm valve and 4" ball float for automatic water replenishment.

It bolts to any wall or railings with the (rust proof) stainless steel brackets supplied, has a water capacity of 22 Litres/5 Gallons and is fitted with a 25mm/1" drain off plug for easy cleaning. Water can be supplied from either side of the bowl.

We have also designed a galvanised steel bumper bar to protect the water drinker from livestock which may either bump into it accidentally or in some cases attempt to use it as a scratching post. Normal consequences can result in drinkers being knocked off walls, broken water fittings, flooding etc. With the protective bumper in place, this can greatly prolong the life of the drinker and protect your investment, while at the same time allowing your livestock unobstructed access to clean drinking water.

Specifications
